

high performance exhaust systems

Utter®
U-PORT

● DEAR CUSTOMERS

As always we are pleased to present you with the new edition of our catalogue covering the whole range of our products. We have expanded our offer introducing many brand new releases in each assortment group. We bring to you new dedicated mufflers, modifications to tail pipes' line and car exhaust embellishers created for specific car models in response to the ever-changing trends in pattern-designing and market requirements.

Thanks to the development of the production process technology and further improvement of the quality management system, our production plant has been awarded the certificate of conformity, meeting the requirements of the most demanding motor vehicle standard – ISO TS 16949:2009.

We have fully committed ourselves to the implementation of the above standard in order to respond to the dynamically changing market. Our ultimate goal is to satisfy your demands supplying you with product which adhere to the strictest quality norms. Here is your chance to design and build your own custom car. Will you take advantage?

TAIL PIPES OFFER

Tail pipes - single and double

They are assembled by screwing with a clamping ring or welding on. They have a so-called assembly cup, which is adjusted appropriately to the diameter of the exhaust pipe.

Most frequently offered diameters:

Ø42 Ø45 Ø50 Ø55 Ø60

– depending on the technical capabilities.

Dimensions quoted in the offer specify the following:

For *single tail pipes* – shape and length of the assembly element

For *double tail pipes* – shape and length of the decorative element + length of the connecting element, without an assembly cup.

* (asterisk) indicates a tail pipe without perforated insert (diffuser)

Mounting pipes

They are assembled directly to the end-cover of the silencer, by welding them on.

Mounting pipes are marked with **orange** colour.

Tail pipes and embellishers for specific car models

They are assembled on the exhaust pipe of the silencer with a fixing screw or a clamping ring.

Dedicated embellishers are adjusted to specific car models. They give them an original look and ensure trouble-free assembly.

CONSTRUCTION

Products of Ulter-Sport have homologation certificates confirmed by TÜV SÜD Munich, which cooperates with us in relation to the compliance of our products with the respective regulations of the European Union.

● **Separating walls** made of stainless or aluminium plated steel are personalized for exact car characteristics. The absorption and reflective chambers have dimensions which guarantee the optimum amounts of counterpressures at the maximum reduction of the level of emitted noise.

● **Sound absorbing material** with the adequate specification of the frequency of the physical sound absorbing factor. The material has a high technical and mechanical strength.

● **Tail pipe** made of stainless steel, appropriately fitted to the silencer in respect to the acoustics, which guarantees the minimum flow resistance at the same time.

● Appropriately profiled **inlet pipe**.

● **Silencer body** closing the silencer's chambers, which is required for the correct occurrence of the wave effect and increasing the effectiveness of sound absorbing material and, which concurrently guarantees trouble-free operation for many years, thanks to the application of aluminium plated steel or stainless steel.

● **Perforated pipes** applied to avoid the direct transfer of the front acoustic wave, which considerably reduce the distribution of noise and improve the wave processes in the expansion chamber.

Appropriately selected perforation is a guarantee of the effective silencing of the middle and top bands by sound-absorbing material in the thoroughfare chamber. The surface of the perforation is adjusted to the type of engine and its cubic capacity and the dimensions of the intake system. It allows the free flow of exhaust gases, which is required to ensure optimum engine performance within whole rotation range.
